Odour Emission of a Flour Mill

Dear Mr Hanley,

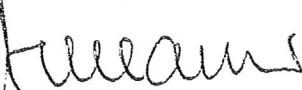

In pursuance of your request regarding odour emissions of a flour milling plant, we would like to give you hereafter the following statement:

Wheat is a natural and high valuable raw material which will be processed in the milling process into flour for starch processing and bran for animal nutrition.

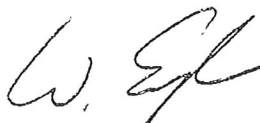

Bühler as the word-leading company in the design and construction of flour milling plants over the last century has built many flour milling plants in residential areas all over the world. The application of latest technology and equipment, as for your new flour milling plant, did not require any special measurements and/or supplies of exhaust air treatment concerning odour emissions. The equipment used for your pneumatic system, cleaning aspiration system as well as mill aspiration system is meeting the today's high sanitation regulations applied world-wide.

We remain at your entire disposal for any further information you might require.

Yours very truly,
Bühler AG
